HMEX Revenue Management Performance Review FY24 vs FY 25

Market Share, Pricing & Portfolio Analysis

Adrian Jasso

18/05/2026

Disclaimer: All data in this case is fictional and used for demonstration purposes only.

HMEX is losing market share despite aggressive pricing, every +1% in price is reducing ~1.45% in volume

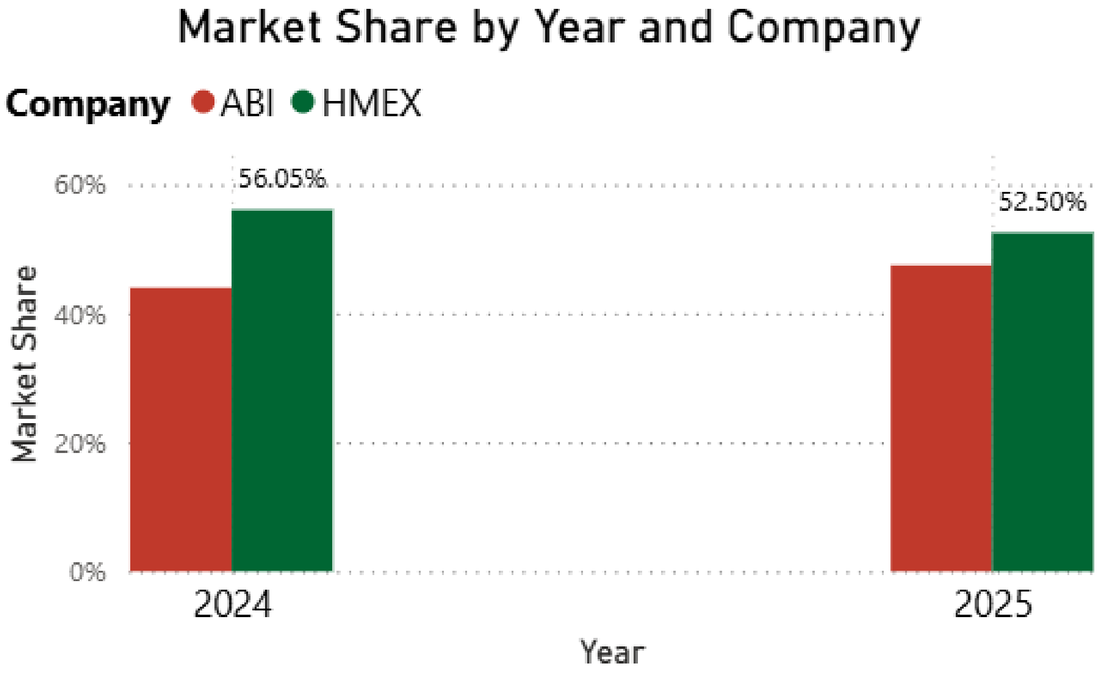

- -3.55 pp Market share contraction (56.05% → 52.50%) driven primarily by volume loss.
- +12.8% Price / -18.6% Volume Implied elasticity of -1.45
- 84% concentration in CAN 355 HMEX is structurally more exposed than ABI (73%) to a single pack format

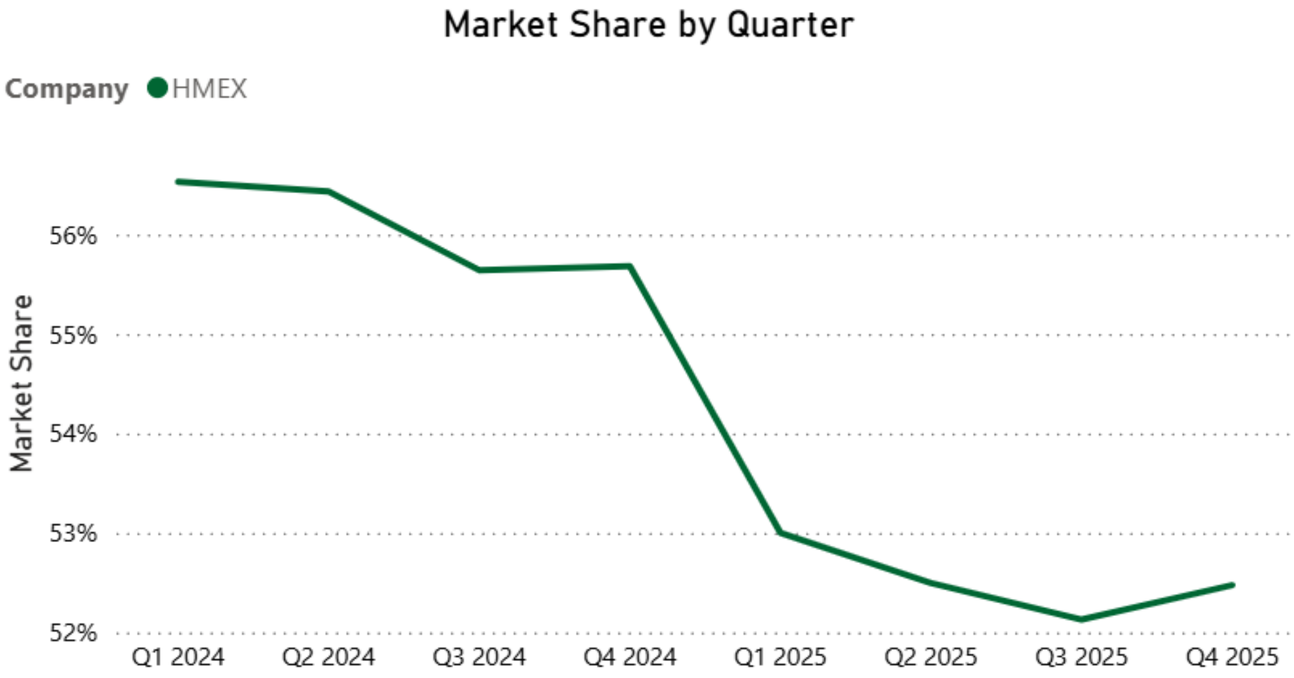

Recommendation

Pause uniform price increases and shift to a segment-by-segment approach. Diversify beyond CAN 355 to defend share.

HMEX market share dropped 3.55 pp in FY25

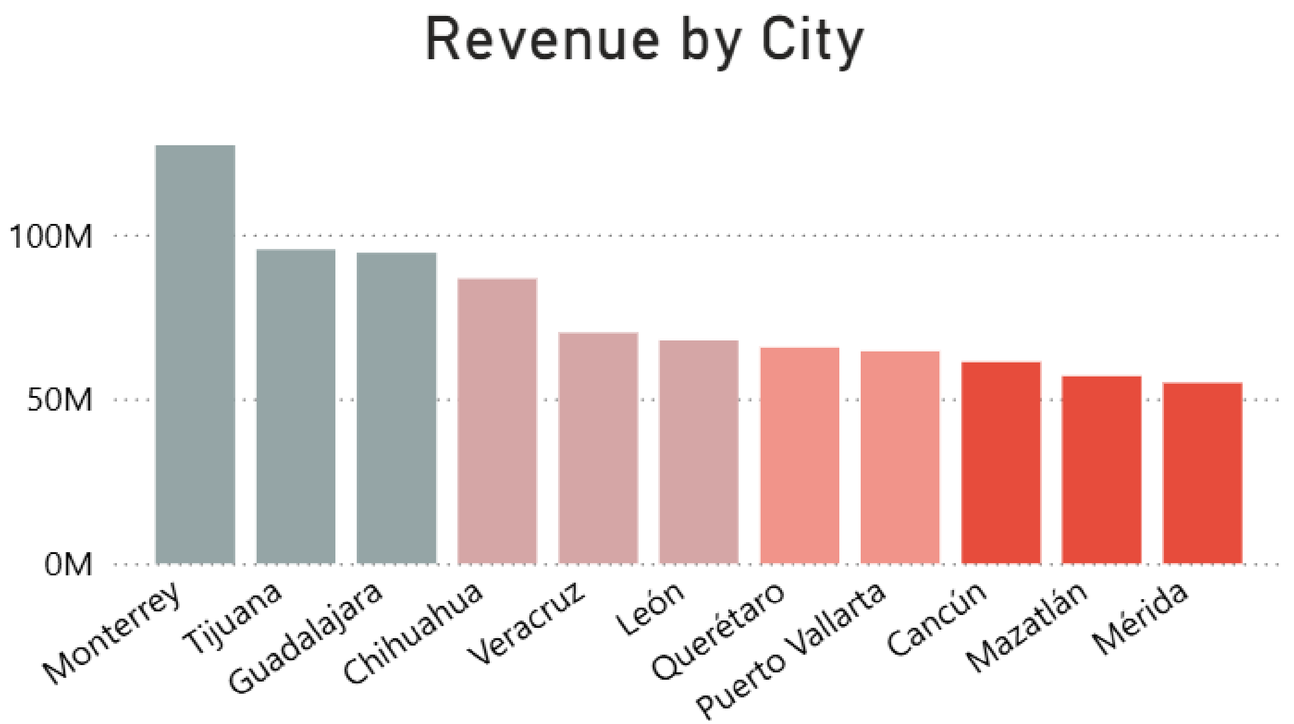

The market share decline is not gradual, but a drastic drop in Q1 2025 where 2.7 pp were lost.

Cancún, Mazatlán and Mérida are HMEX's weakest cities by total revenue

Volume is the limiting factor, with all three cities tracking at 20-22k hl, well below the 28k hl portfolio average.

Cancún

$61.29M
Revenue

Mazatlán

$56.91M
Revenue

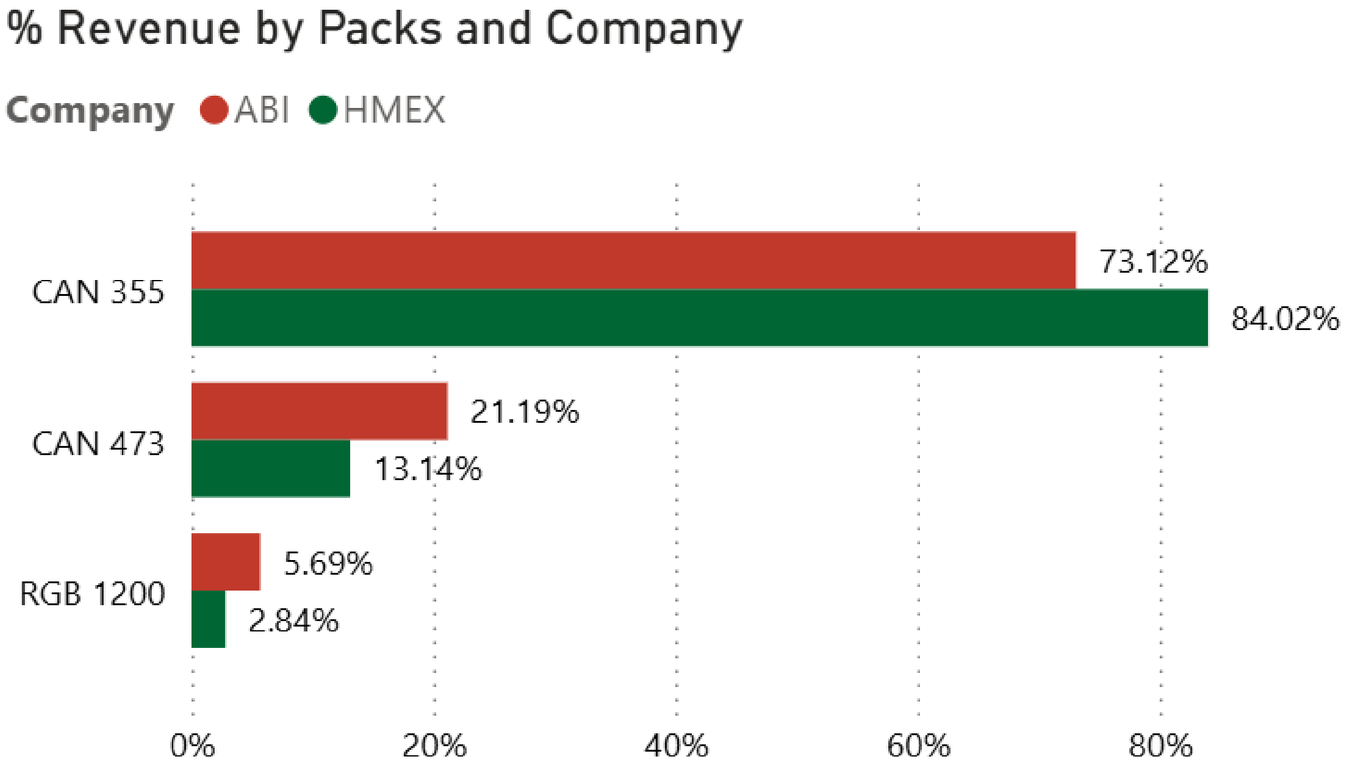

Mérida

$54.88M
Revenue

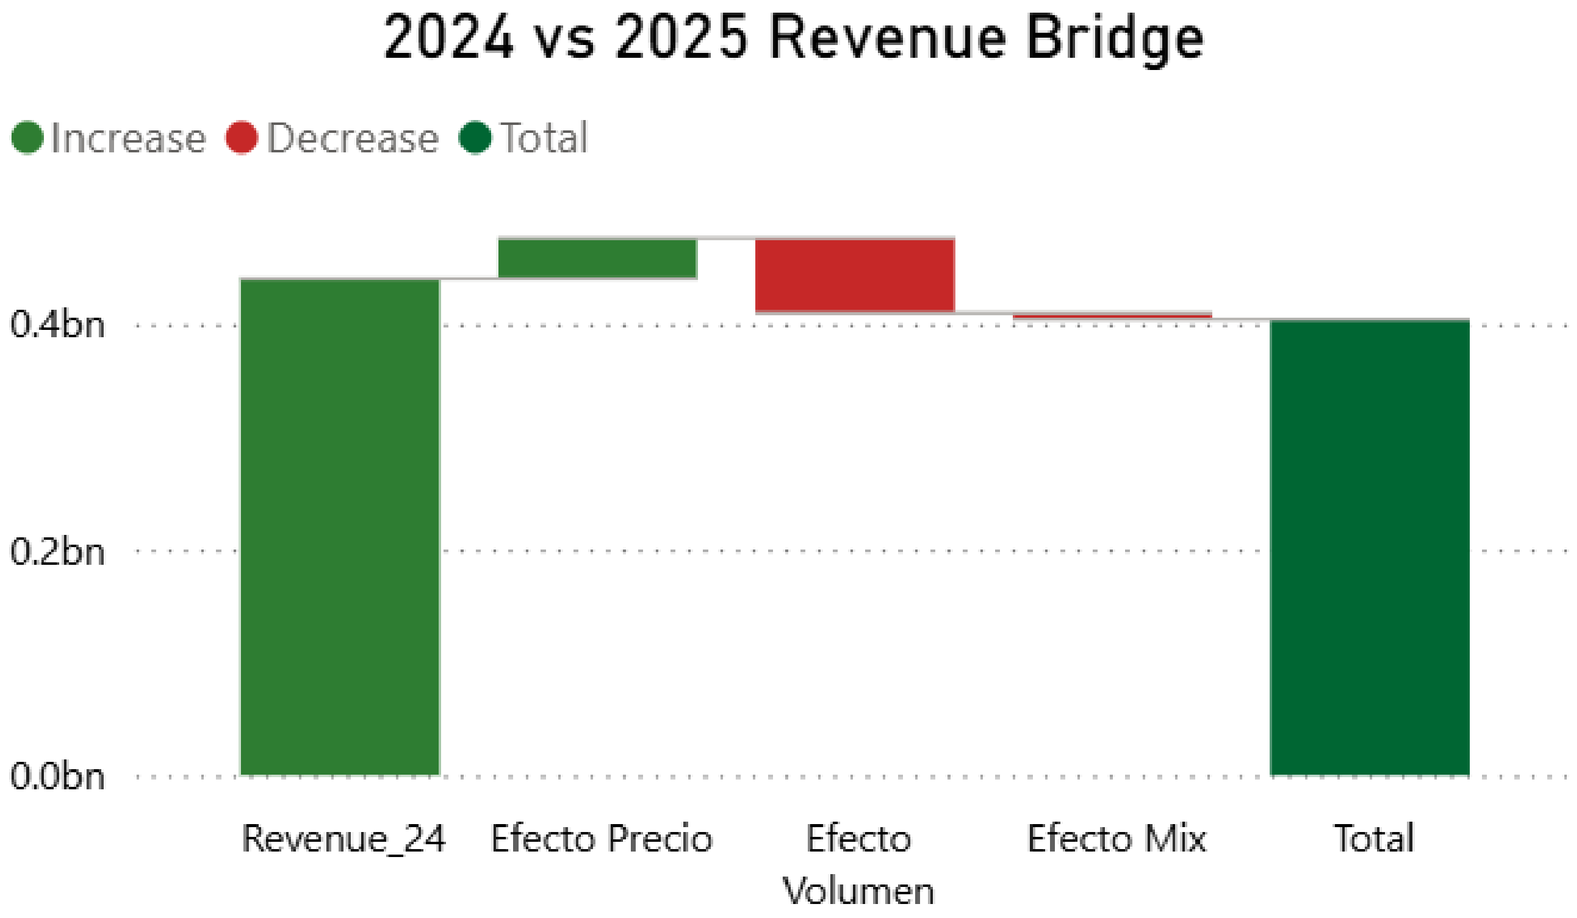

HMEX is over-indexed on CAN 355 (84%) vs ABI (73%) — limits portfolio flexibility

Single-pack dependency means HMEX has no second lever when CAN 355 demand softens.

Diversification towards CAN 473 is a strategic priority.

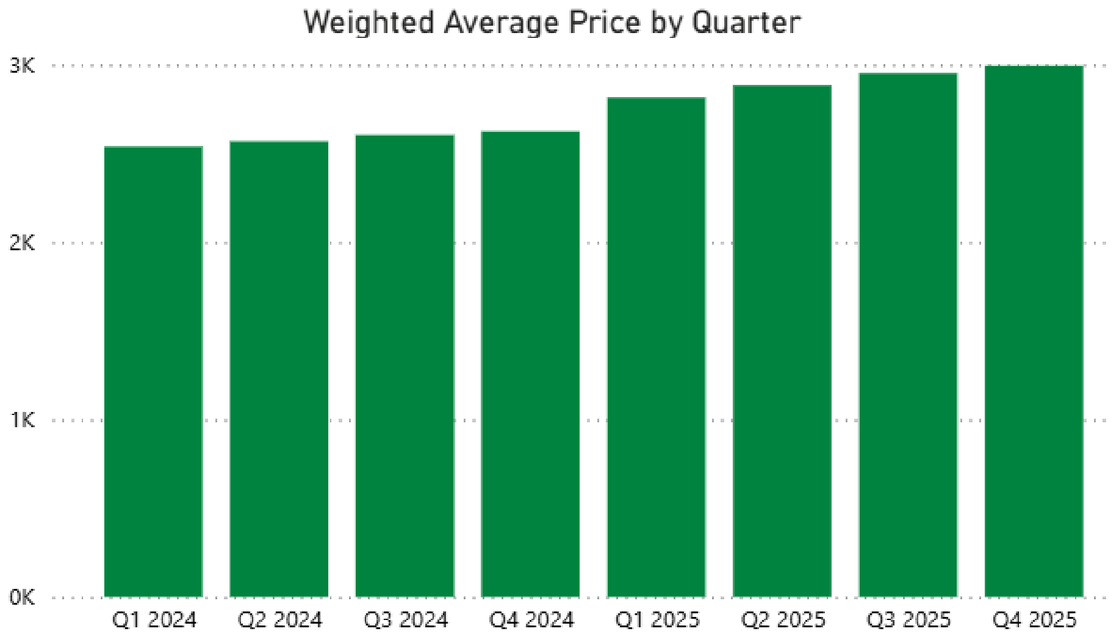

Total revenue contracted despite price increases- volume losses overwhelmed the price effect

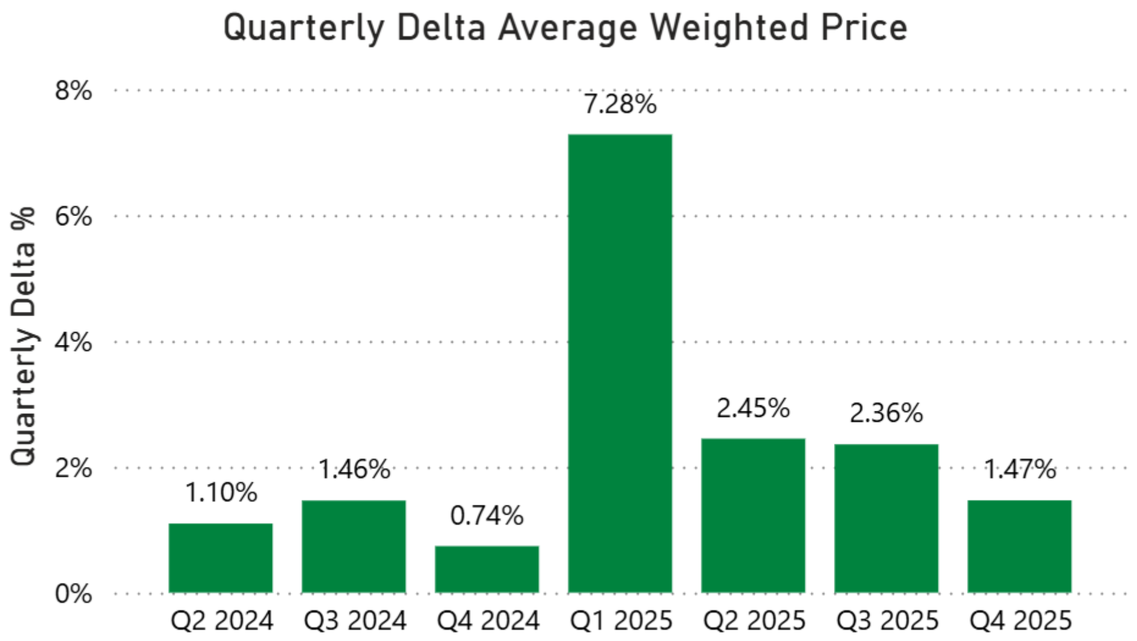

For every peso gained through pricing, HMEX lost $1.83 in volume – the strategy is value-destructive at the current elasticity.

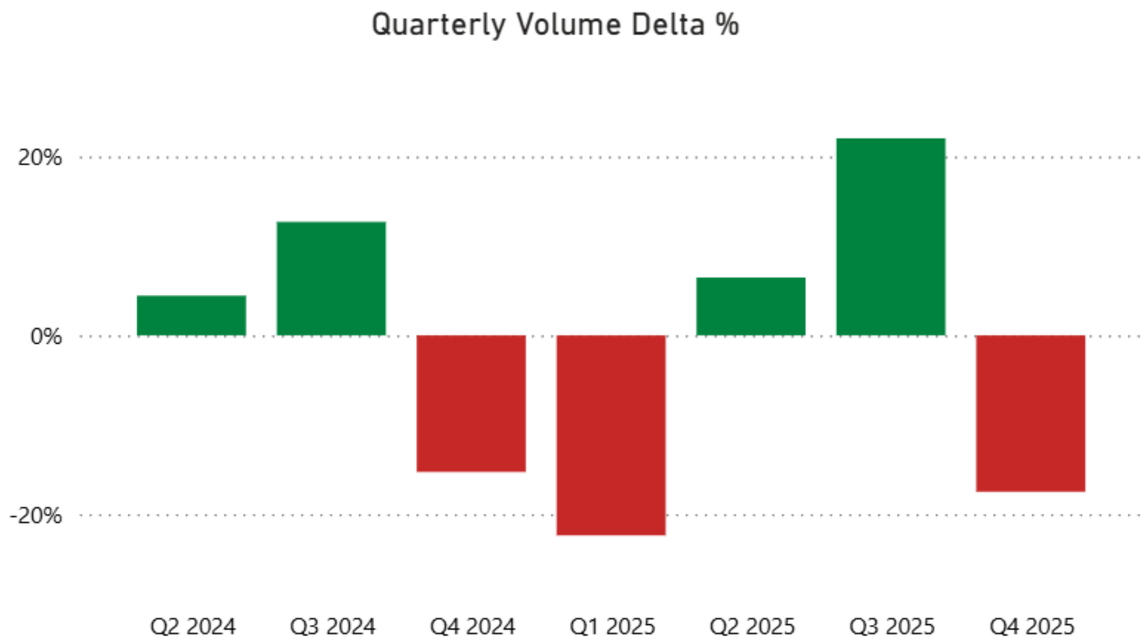

- Price Effect: $36,247,401
- Volume Effect: -$66,663,619

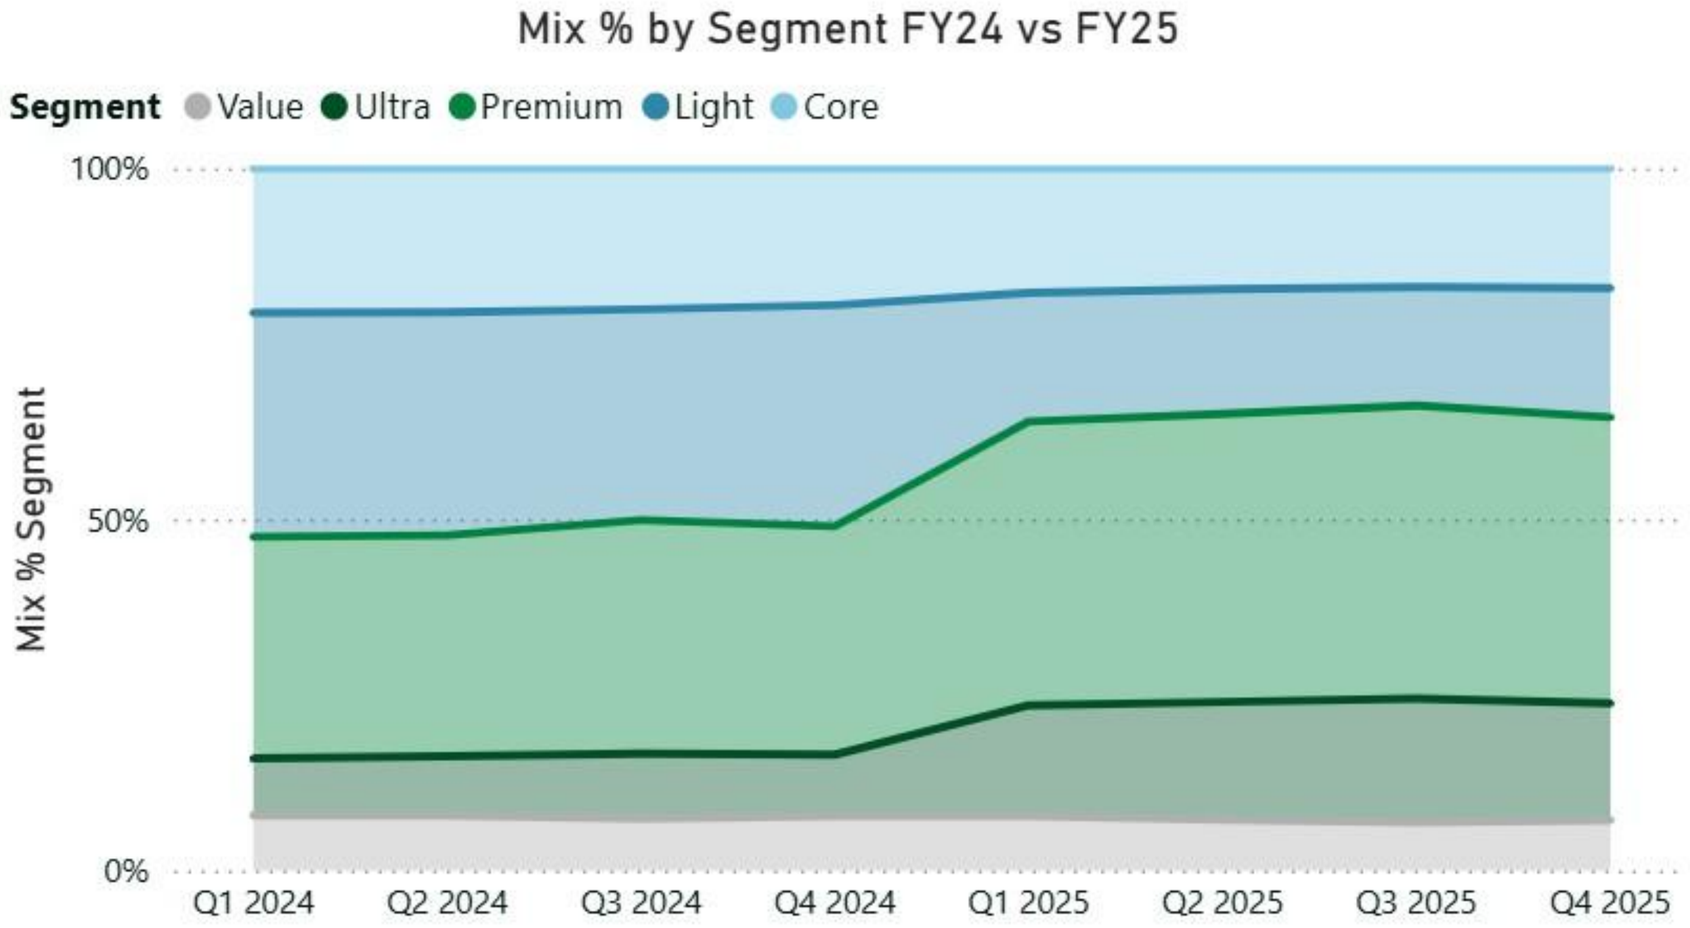

The +7.28% price spike in Q1 2025 triggered immediate market resistance, resulting in the period's steepest contractions: -22.36% in volume and -2.7% in market share.

Premium + Ultra grew from 40% to 57% of mix (+17.7 pp), suggesting a premiumization in the mix.

Each 1% price increase is reducing volume by ~1.45% - pricing is now reducing revenue

Eight quarters of HMEX data align along a clear negative slope.

The FY25 quarters have shifted up and to the left, confirming the pricing-volume trade-off is a consistent pattern.

Questions & Discussion
